

SmallHD PageOS 4 Firmware v4.3.2

October 20th, 2020

CHANGELOG

Firmware update Best practices:

- SD card 2,4,8,16GB
- Backup Profile before update (recommended)
- Use AC power or fully Charged battery
- Note older version of firmware before update

Bugs Fixed:

- Cine 7 SK RX Monitors will now correctly accept Camera Control for RED® licenses
- Control for RED® DSMC2®
 - Fixed ISO Menu
 - FPS Menu now shows the current selection when opened

New Bugs:

- HDR Causes a Blank Screen
 - If the user applies a new calibration, and skips the option to set the display's "HDR Range" (the black point and white point), then any time an HDR color pipe is selected the display will be blank.
 - Workaround: Set the HDR range during calibration.
 - NOTE: If the display goes blank, pressing the "Input" button is the easiest way to switch input pipes and recover from this scenario.

Recommended Practices

- Connect third party external recorders directly downstream of your source device (i.e. camera), not downstream of the monitor.
